Report on training course at University of Montenegro, Biotechnical Faculty, 29th March to 3rd April, 2015

The six-day visit to Podgorica was divided into the following tasks:

Sunday, 29th March:

Arrival in Podgorica, discussion with Dr Igor Pajovic about plans for the five-day training course and technical arrangements about facilities and meeting with experts from IHMS.

Monday, 30th - Thursday, 2nd April:

During the first day of this visit particular attention was devoted to exchange of experience and knowledge between experts from FoA and IHMS. Discussion was focused on comparison of past and future climate in Serbia and Montenegro, as well as relation between CC and extreme/adverse weather events which are often exerted as a consequence of CC. Days 2 to 4 are devoted to analysis of future climate in Montenegro and selection of appropriate data series. In order to provide as complete as possible data series and comprehensive analysis of past and future climate it has been decided to use 1981-2010 as a referent period for Montenegro for future CC impact analysis.

Assessment of CC impact on plant disease appearance. Analysis of models which can be used in assessment studies. Scope and functionality.

Exercises: Agriclim_Lite_v1.2 software software was partially used in analysis of past and future of agroclimatological conditions while for precipitation and sum of effective temperature will be designed FORTRAN code for this calculation.

Friday, 3rd April:

Overview of obtained results and discussion of future tasks and realization of project activities in second project year.

Dr Branislava Lalic, Faculty of Agriculture, University of Novi Sad
Friday, 3rd April, 2015
